BAL-TROL

Did you find what you were looking for? Regardless if you did or not, please contact us. We will be happy to investigate your handling problems and come up with an optimal solution for you. The smallest Bal-Trol have a capacity of up to 20 kg and the most powerful up to 1000 kg. There are many steps in between. We are convinced that we will find a handy solution for you.

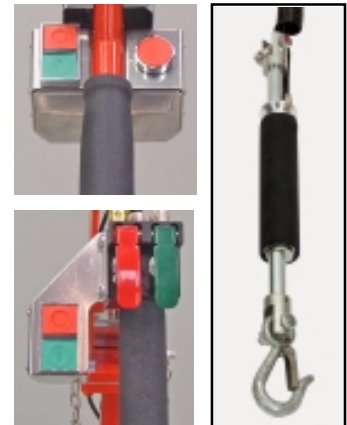

All our products are driven by compressed air, CE marked and Atex approved (II 2G T4).

Balancing

is used when products of equal weight need to be handled quickly. The load is handled weightless, and the operator can manipulate the product with his hands directly on the object. This gives superior flexibility and precision.

Pro Speed-Handle or Sensi-Touch

is used when the weight of the lifting objects varies. Proportional control of up and down speed. A balance of ± 10 cm in height makes it easy to mount for example a roll to an axle.
